Welcome to EasySave! copy

EasySave Tip

Logs & Real-Time file location: Stored in the same directory as the execution file.

Welcome to our user Wiki! This document explains how to use our app.

Quick Started

Minimum actions required.

- Create a backup job: Set parameters to create a backup on your system.
- Execute backups: Choose one or more backup jobs to execute, and they will start immediately!

Detailed Features

Everything you can do is here!

- 🥆 Backup job:
 - Setup:
 - Specify a name, a source path, a destination path, and a backup type.
 - Options:
 - Perform a complete backup, which copies all files, or a differential backup,
 which only copies files that have changed since the last complete backup.
 - Back up files from and to any accessible location on your computer.
- Backup execution:
 - 1 → Launch a single backup job.
 - 1-3 → Launch all jobs within a specified range.
 - 1;3;5 → Launch specific jobs.
- 💾 Logs
 - The application records all operations in log files (one per day).
- NealTime
 - Each backup execution is tracked in a real-time file.
- A Language
 - You can switch between available languages in the application settings.
